Climate Adaptation and Urban Resilience in Coastal Cities

Coastal cities face rising risks from flooding, storm surges, and sea-level rise. This special issue [Climate Adaptation and Urban Resilience in Coastal Cities](#) in the journal [Marine Development](#) seeks the latest research, case studies, and reviews on the prediction and assessment of compound climate risks in coastal cities, the design and implementation of adaptation strategies, and pathways for enhancing comprehensive urban resilience. Contributions on adaptation strategies, resilience frameworks, nature-based solutions, green infrastructure, socio-economic impacts, and policy innovations are welcome.
